

400G Dedicated Switch Test Report

Overview

Dell Technologies commissioned Tolly to benchmark a 400GbE network fabric consisting of 10 Dell PowerSwitch Z9664F-ON switches with Dell Enterprise SONiC Distribution version 4. 0 in a RAIL optimized topology. This report provides the results. The Dell PowerSwitch line offers high-performance and high-port density that can serve as a network fabric for AI. Highly configurable, multi-protocol. Our Cisco Nexus 9000 Series Switches portfolio offers distributed modular, centralized modular, and fixed switches including super spine, spine, leaf, and border leaf. A new modular chassis design. H3C UniServer R6900 G6 server, running a full load of 777 high-load virtual machines, achieved a performance score of 13,880 points, setting a new record. H3C's sub-brand Aolynk, designed specifically for SMB (small and medium-sized business) in global markets. An ultra-compact, palm-sized AI. From its origins as an ultra-high performance technology, reserved for a few organizations with extreme networking demands, 400 Gigabit Ethernet (400GbE) has evolved into a mainstream technology providing significant advantages to network operators across a wide spectrum of use cases. Currently, 400Gbps is experiencing the strongest growth in deployments in data centres because the standard is in place and products are commercially.
