

6300a Low Voltage Busbar

Overview

Very small size, high resistance to electrodynamic stresses, low impedance, low voltage drop. Energy saving and higher short circuit withstand. It is designed to work at 55°C of ambient temperature: ideal for heavy duty applications, higher temperature environments and installations compared to independent busbars. Three combinations of conductors are available only on this system. Power, ABB's pioneering solution for main distribution switchboards with rated current up to 6300A and shortcircuit current up to 120kA, meets diverse plant requirements depending on the type of installation, required degree of protection and electrical and mechanical specifications. IBAR HX is a range of high-power busbar trunking systems based on a common technology that has been shown to outperform its competition. It is a safe and robust power distribution system with high electrical efficiency. The POWERTRUNK and POWERFLOW series of busbars use the latest generation of 3D development and design, which is the latest generation of busbars. All bus bars are made of all-aluminum extruded aluminum alloy molds and manufacturing to ensure manufacturing and product accuracy.
