

800g Optical Module for Cloud Computing

Overview

Lumentum's 800G 2×DR4 OSFP transceiver provides high-speed, energy-efficient optical connectivity for AI and cloud data centers. 25 Gbps PAM4 per lane, achieving a total bandwidth of 800 Gbps over. With the expansion of business scale, data centres are facing increasing data processing demands, many large Internet companies need to build new 800G data centres or upgrade their own data centres from 400G rates to 800G rates. Developments in three distinct areas are needed for 800G deployment: optical modules and direct attach copper (DAC) cables, switch ASICs, and 800GE. An 800G module is a high-speed transmission module commonly used in data centers, communication networks, and other areas requiring high-density data transmission and high-speed data processing. It boasts the extraordinary ability to process 8 billion bits per second, more than doubling the. At Cloudtronics, we are proud to deliver advanced 800G optical modules designed for high-speed data transfer, optimized for data centers, cloud computing, and next-generation telecom networks. These transceivers are now in stock and available for same-day shipping, helping.
