

AI installation prompts server disconnection

Overview

Common installation issues include problems with dependencies, runtime installation, module installation, and GPU support configuration. Ensure system packages are up-to-date. On Linux/macOS, run `apt-get update` or equivalent before installation. "" with open (f" {MAIN_DIR}/apikey_gpt4turbo. strip () client = AzureOpenAI (api_key=api_key, api_version="2023-09-01-preview". The subject title is what is showing on the dashboard and the log is showing alerts cancelled because AI not responding (obviously.) According to the log CodeProject. The new version requires an uninstall of previous version. When trying to use AI prompts, the following error may occur: Connection to Exploratory server has been disconnected. Please check your internet connection and try again. AI prompts require network connectivity, so this error occurs when the Exploratory desktop cannot establish a network. Method invocation is supported only on core types in this language mode. What must I do to re-install the server successfully again?

I am able to serve a local instance of ComfyUI to it but I prefer running a local Managed Server. Check your connection and proxy settings How to disable AI-powered code completion?

How to know which LLM model is used in case of cloud completion in AI Assistant?

What is zero data retention mentioned on JetBrains AI.
