

AI server H20 card

Overview

The NVIDIA H20 is a high-performance data center GPU based on the Hopper architecture, optimized for AI inference and large-scale model computation. It offers 96GB of HBM3 memory with a 4.0 TB/s bandwidth, powerful yet energy-efficient AI processing at 350W, making it ideal for cloud applications. The counterintuitive truth about why the "weaker" H20 often beats the mighty H100 in real-world enterprise workloads Meet David, CTO of a growing AI company. Six months ago, he proudly deployed a state-of-the-art H100 cluster—8 GPUs, \$2 million investment, enough compute power to make other CTOs. The NVIDIA H200 GPU supercharges generative AI and high-performance computing (HPC) workloads with game-changing performance and memory capabilities. As the first GPU with HBM3E, the H200's larger and faster memory fuels the acceleration of generative AI and large language models (LLMs) while. Unveiling NVIDIA's HGX H20, a powerhouse driven by the cutting-edge Hopper architecture. 0 TB/s memory bandwidth, this GPU delivers unparalleled performance in AI applications. Diverse Tensor Cores, including INT8, FP8, BF16, and FP16, contribute to up to 296. Nvidia Corporation stands at the forefront of the artificial intelligence (AI) revolution, producing cutting-edge graphics processing units (GPUs) that power advanced AI applications. Among its latest offerings are the Nvidia H100 and H20 AI chips, which have garnered significant attention not only. Huawei has unveiled its Atlas 350 AI accelerator card, a direct competitor to Nvidia's offerings in China.
