

Advantages of CFP4 Optical Modules

Overview

The main differences between CFP, CFP2, and CFP4 lie in three areas: 1. Size (Form Factor) Smaller size = more ports per switch/router 2. Power Consumption Lower power = less heat + better energy efficiency 3. Performance & Architecture Newer architectures reduce complexity and. A CFP optical module is a high-speed pluggable transceiver used in fiber optic communication systems to enable 100 Gigabit Ethernet (100G) data transmission over optical fiber. The term “C form-factor pluggable” refers to the specific form factor and electrical interface of these modules, ensuring. Advantage: Highest port density for 100G in rack units. Electrical Interface: 16 × 25 Gbps or 8 × 50 Gbps lanes. Use case: 400G Ethernet, 5G backhaul, hyperscale data centers. Leaf-Spine network architecture.
