

Aggregation Switch with Optical Interface

Overview

A fiber optic aggregation switch is a high-capacity network device designed to integrate and manage multiple fiber optic connections from access layer switches into fewer and faster uplink connections to the core network. Equipped with eight SFP+ ports, two additional SFP28 ports and one RJ45 console port for configuration. It also enables easy expansion by simply adding more fiber or network. LANCOM aggregation switches enable high-performance and hierarchical switch infrastructures to be set up and serve as the distribution basis for networking subordinate access switches. Faster replacement and priority support, covered for 5 years. High-performance 10G SFP modules for optimal connectivity. It is applied in enterprise campus network and easy to deploy Layer3 switching solution that offers enhanced security and 1G/10G/25GE/40GE uplinks, RIP/OSPF/BGP/IS-IS, L2&L3 Multicast, VST/M-LAG. The Aggregation Switch for Optigo Connect Spectra is designed specifically for deploying Operational Technology networks in intelligent, fiber-based buildings. It connects up to 256 Edge Switches and allows users to centrally monitor and manage their entire network from the Optigo OneView™.
