

Can an IPTV network cable be connected to a switch

Overview

Connect the cables: Plug one end of each LAN cable into the Ethernet port on your IPTV set-top box or other device. The other end should be connected to a network switch or directly to the IPTV modem. How to configure router and switch in a way, that on port 2 of switch I have IPTV and on ports 3,4,5 I have still internet ?

The VLAN Internet service is on ID 51, priority 0. (this is where I learned about IPTv). Connect the network switch: If you are using a network switch, connect it to the. - For IPTV a VLAN is created by the router and assigned to a single port (LAN4) - Lan 4 is connected to a FS105 switch - Two STBs are directly connected to switch This setup works perfectly - Add a third STB connected to the switch via a POWERLINE solution (TP-LINK) The powerline shows continuous. My ISP does not use any igmp proxying or something like that, The only requirement is to send STB packets directly to the ISP switch (in the apartment) over the router tagged with a Vlan Id 103 (Vlan 103 is the ISP IPTV network).
