

Can fiber optic cables be used for the switch s outgoing lines

Overview

The short answer is no - RJ45 connectors are designed for electrical Ethernet signals, while fiber optics transmit light pulses through glass or plastic. However, modern networks often combine both technologies. In addition, fiber cables can transmit data over several kilometers without signal degradation, making them ideal for connecting switches in large campus networks and between different buildings. As they do not emit electromagnetic signals, they're difficult to tap and secure against eavesdropping. A pair of fiber to Ethernet media converters can create a beneficial electrical barrier when running Ethernet between buildings or to outdoor Power over Ethernet (PoE) devices such as. Traditionally, network switches have been connected using copper cables, but with the increasing demand for high-speed and reliable connectivity, fiber optic cables have gained prominence. We have existing core switch model C9300-NM-8X, we are extended small office same building in different floor.
