

Classification of Power Grid Communication Optical Cables

Overview

There are two types of these cables, OPGW (optical power ground wire) and OPPC (Optical power phase conductor) cables. OPGW and OPPC cables are not a new concept. These cables are installed on poles or towers at the. Part of a series of white papers on Secure Pathways for Resilient Communications. In today's rapidly changing energy landscape, achieving a more carbon-free grid will rely upon the efficient coordination of numerous distributed energy resources (DERs) such as solar, wind, storage, and loads. This. Optical fiber became a viable means of communications around 40 years ago, and its use and deployment has been increasing ever since. Some primary examples include optical. Communication networks are an integral part of interconnected transmission lines in a power grid, analogous to the spinal cord for control signal and information exchange among substations, data hubs, and load dispatch centers. This development goes hand in hand with.
