

Communication Power Supply and System Design

Overview

Communications infrastructure equipment employs a variety of power system components. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end. A power efficient. Demand for mobile data is growing at a steep rate as new markets and applications continue to emerge. The data can be defined as a set of addressable registers with data bits uniquely defined for each IC signal (SCL) and a bidirectional data signal (SDA). PMBus adds the alert signal to this, along with a defined set of registers/commands to. 13. An area gaining significant industry attention today is the application of digital technology to power supply.
