It's important to place the heavier equipment in the lower part of the rack. This reduces the risk that an administrator will be injured when installing the equipment. Even if a power lift is available, heavy equipment should not be placed near the top — taller. Network racks contain routers, switches, and other networking gear. They generally aren't as deep as server racks, and the equipment they contain isn't as heavy. Often, network racks are open two- or four-post racks that are secured to the floor to prevent tipping. Although network racks contain different equipment than server racks, the same equip. Installing the equipment in the right position is the first step. Next, it's important to consider accessories that can optimize the setup of your server or network rack. Proper cable management is critically important. Oftentimes, data centers have hundreds of racks and cabinets with various equipment and cables. Following data center cable manage.
