

Connecting cold joints

Overview

Learn how to prep and bond a next-day concrete pour to repair a cold joint. The delayed placement prevents full integration and knitting between the concrete batches and might lead to reduced structural robustness, increased. A cold joint in concrete, also known as a construction joint, is a point in a concrete structure where fresh concrete is placed against previously cured or partially cured concrete. Identify cold. Managing cold joints is an important concept to grasp when working on concrete projects. This method involves preparing the existing concrete surface by cleaning and roughening it, applying a bonding agent to. Cold joints are formed primarily between two batches of concrete where the delivery and placement of the second batch has been delayed and the initial placed and compacted concrete has started to set.
