

Cost-effective 1 6T optical network switch

Overview

Leveraging a linear direct-drive (LPO) silicon photonics architecture combined with a compact SOCKET-type package, this engine enables ultra-efficient, cost-optimized, and highly scalable 1.6T optical modules. This article explains how this new 1.6T optical modules are, the major module types involved, and the application scenarios driving adoption. 6TbE switch in a 3U form factor targeted for 19-inch racks that provides 102.4Tbps bandwidth, purpose-built to support AI backend networks for scale-up and scale-out networking. 6 terabits per second of bandwidth in a single module. More importantly, it is not just a speed upgrade—it is a foundational building block for next-generation AI infrastructure, enabling. The 1.6T Coherent-Lite pluggable transceiver, the latest optical innovation from Ciena, powered by advanced 3nm CMOS. 6T networking is becoming a reality as AI clusters and data centers continue to scale.
