

Distribution Box Protection Classification Standard

Overview

This system was drafted by the International Electro Technical Commission (IEC) and announced in IED529 (BS EN 60529:1992) Outer Packaging Protection Level (IP code). The IP protection level consists of two numbers. •. means: Not possible to use.) Identification number of the Notified Body responsible for the surveillance of the manufacturer's quality system (Cat. Certification Body (CB) that has tested. To achieve total ACCEPTANCE there's a first need for CONFIDENCE. Each stakeholder needs to understand ISO/IEC based Types of Protection. Hot surfaces Flames, hot gases, hot particles Mechanically generated sparks Electrical equipment Stray electric currents, cathodic corrosion protection Static. Electronic or electrical equipment of any type for use in European hazardous areas must be ATEX certified as required by the EU directive 94/9/EC - also known as the ATEX directive. The IP protection rating system power terminal block provides a method to classify products based on the degree of dust, water and collision resistance of electrical equipment and packaging.
