

Double-ladder cable tray with increased span

Overview

Large-span double-ladder side ladder cable trays employ a double-sided beam and ladder-type crossbar structure design, capable of handling cable laying needs with larger spans while ensuring structural stability and safety. Ladder cable tray without covers provides for maximum air flow, dissipating heat produced in current carrying conductors. Dust buildup is minimal compared to other types of cable tray, such as ventilated trough or solid bottom. In areas where there is the potential for dust to accumulate, ladder. When developing our cable support OBO can offer reliable solutions for systems, three attributes are at the routing and fastening cables securely core of what we do: efficiency, resili- for each of these installation challenges and safety. es in the industrial environment.
