

# Enable SNMP on Huijue Core Switch

## Overview

Log in to the NMS, set the SNMP version to SNMPv3, set the user name, and set the security level. Based on the configured security level, set the authentication mode, authentication password, encryption mode, and encryption password. The Simple Network Management Protocol (SNMP) is a standard network management protocol widely used on TCP/IP networks. SNMP uses Management Information Bases (MIBs) to store available objects in a hierarchical. Figure 11-64 Configuring SNMPv3 to implement communication between the NMS and switch Before configuring SNMP, complete the following tasks: Ensure that a reachable route exists between the switch and NMS. The configuration procedure is not provided. SNMP has the following advantages: A network. This document describes how to configure and maintain devices through the web NMS client, including device status statistics, SVF, interface, Ethernet switching, IP service, IP routing, security, ACL, AAA, system management, QoS, WLAN, diagnosis service, and EasyDeploy.
