

Environment for Radio Frequency Remote Fiber Optic Cables

Overview

Environments with strong electromagnetic fields, strict isolation requirements, lightning protection concerns, or severe constraints on cabling weight and volume also favor RToF implementations. Radio frequency over fiber (RToF), also known as radio over fiber (RoF), is a hybrid technology that combines wireless communication with fiber optics. Unlike conventional fiber. RF over Fiber (RToF) was developed to address the limitations of traditional coaxial cables in transmitting high-frequency RF signals over long distances with minimal signal loss and interference. This method combines the advantages of fiber optics—such as low signal attenuation, immunity to electromagnetic interference, and wide bandwidth—with. HUBER+SUHNER is a leading manufacturer of high-performance RF and microwave cable connectivity.
