

Equipment companies for optical module testing

Overview

Explore 74 top manufacturers and suppliers of Optical Testing Instruments in our comprehensive photonics buyers' guide. An optical testing instrument is a device or system used to evaluate and measure the performance, quality, and characteristics of optical components. 3D Interconnect Designer provides a flexible modeling and optimization environment for any advanced interconnect structure, including chiplets, stacked die, packages, and PCBs. Emulate every part of your data center infrastructure. Use 25+ X-Series. Headquartered in Singapore, NEXUSTEST is a global supplier of high-end test equipment for the optical and semiconductor markets. Photonics test solutions mainly focus on testing optoelectronic components, such as photodiode, LED, EEL, and VCSEL. Chroma's system integration technology uniquely. Test and characterize modern optical components, including photonic integrated circuits (PICs) and silicon photonics, with unmatched speed, precision and accuracy.
