

Fiber Optic Cable Reel Fitting Conditions

Overview

Recommendations for Fiber Optic Cable Installation Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. The FCR-1000 series cable reels are designed to fit Princetel's standard FORJs and slip rings. The rotary joints are protected inside the drum for durability and seamless deployment of single or multi-channel fiber optic and/or electrical cable with uninterrupted optical and/or electrical signal. Existence of a standard shall not preclude any member or nonmember of NECA or FOA from specifying or using. Fiber optic cable is sensitive to excessive pulling, bending, and crush forces.
