

Fiber Optic Communication and Transmission Major

Overview

Fiber-optic communication is mainly used for transmitting voice, video & telemetry using LANs. The light is a form of carrier wave that is modulated to carry information. One of the greatest advantages is its bandwidth. Because of the wavelength of light, it is possible to transmit a signal that contains considerably more information than is possible with a metallic. general Optical Fiber communication system, advantages of optical fiber communications. Optical fiber wave guides- Introduction, Ray theory transmission, Total Internal Reflection: Attenuation, Absorption, Scattering and Bending losses, Core and Cladding losses. This comprehensive review explores OFC's historical evolution, core principles, components, and versatile applications.
