

Fiber optic cable reel configuration

Overview

The reel's structural components consist of two flanges, central drum, flange bolts, SmartReel™ test connector and horizontal wood slats (Figure 1) that keep the reel in alignment and protect the fiber cable from any damage that may occur during transporting and storage. The FCR-1000 series cable reels are designed to fit Princetel's standard FORJs and slip rings. The rotary joints are protected inside the drum for durability and seamless deployment of single or multi-channel fiber optic and/or electrical cable with uninterrupted optical and/or electrical signal. Recommendations for Fiber Optic Cable Installation Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. It is used with industrial jumpers, network cables, audio and video cables, and offers significant cost savings through direct cable integration into reel. OCC's Modular Advanced Reel System (MARS ®), the industry's first lightweight cable deployment reel system, is designed specifically for the demanding needs of harsh-environment fiber optic installations.
