

Finnish Antistatic Flooring Cable Tray Energy-Saving Type

Overview

The Corrugated Base Energy-Saving Cable Tray enhances strength using structural reinforcement principles, allowing reduced plate thickness without compromising load capacity. This saves material, lowers cost, and supports energy conservation and emission reduction. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore. The MEKA® product portfolio is focused on cable ladders, cable trays, wire mesh trays, lighting suspension rails, cable trunkings, socket poles and unipro® lighting. The new PFLITSCH Floor Trunking is an innovative further development of the previous automotive trunking, specially designed for industrial environments with high demands on load-bearing capacity and slip resistance. The walkable trunking cover has been completely redesigned and no longer requires. An electrical cable tray is a type of containment system used to support insulated electrical cables for power distribution, control, and communication. There are several types of cable trays, including ladder, perforated, solid bottom, basket, and channel trays.
