

# Gyda optical cable

## Overview

Loose-layer twisted fiber optical cable GYDTA (72-576 core) is a type of fiber optic cable that is commonly used in communication networks due to its high capacity and long-distance transmission capabilities. Fibre ribbons are housed in slots (with a metal central strength member) to form a cable core. The core is wrapped with water-blocking tape and armored with laminated aluminum tape. Then a PE outer sheath is extruded. In the guide tab, we explain the most important basics, selection criteria and practical recommendations so that you can quickly find. Used for indoor wiring, especially used as breakout cable 2. Used as pigtails and patch cords 1. In this article, we will explore the. The structure of GYDTA optical cable involves placing fiber ribbons in a loose tube with filling gel (the fiber ribbon can be 4, 6, 8, or 12 cores); the central core of the cable is a steel wire (may be added with PE cushioning layer), surrounded by a loose tube and filled with filling rope; the. Company Introduction:Sichuan Yuantong Communication Co., Ltd, a national key high-tech Enterprise, which is located in the beautiful "land of abundance" - Chengdu, Southwest Airport Economic Development Zone, is next to Shuangliu International airport and airway expressway.
