

High Temperature Resistant Cold Joint

Overview

It is used to seal joints, defects, cracks and voids in cast iron, steel and stainless steel. : Metalgrade Hi-Temp should not be used on aluminium or aluminium alloys. Comes with SDS, tech sheet and gloves. A one part water based ceramic and stainless compound for high. Expansion joints for high-temperature applications are engineered to accommodate significant thermal expansion, contraction, and vibration in systems operating at temperatures often exceeding 750°F. Their crucial role lies in accommodating the thermal expansion that pipes experience when. Holz Rubber offers a full range of complete metal frames, assemblies, and hardware. High temperatures can weaken materials, lead to deformation and accelerate wear, while extreme cold can make materials brittle and prone to cracking. It is temperature resistant up to 1093°C (2000°F).
