

# High-precision ultraviolet power meter

## Overview

The UV energy meter simultaneously measures UV energy, intensity, temperature, and irradiation duration across four bands (UVA/UVB/UVC/UVV). It's suitable for UV intensity testing in applications such as curing machines, dryers, coating machines, exposure units, and printing. The handheld controller has a sensor that may heat up and cause the reading to drift. An adapter AC cable, USB cable, RS-232C cable, and Analog out are included in this promotion. The device is believed to be reliable. It also offers a comprehensive range of UV light meters with optimized solutions for almost every UV application. This device features a robust spectral response range of 340nm to 420nm, making it ideal for assessing UV LED lamps across multiple wavelengths including 365nm, 375nm, and 385nm. Good price LED UV meter with 340-420nm spectral response, irradiance measuring range of 0-40000 mW/cm<sup>2</sup>, and a resolution of 1 mW/cm<sup>2</sup>, 1 to 500,000 μW/cm<sup>2</sup> and an accuracy of ±0.
