

# How to get the cable into the optical fiber terminal box

## Overview

Extending the fiber through the box makes use of a cable entry gland. Fasten the cable to the clamps or ties to assure the cable is immovable. Remove the cable jacket and buffer coating material so as to loose. It is used in a terminal box to connect the optical fibers in the optical cable, and to connect the optical cable and the jumper through the terminal box coupler (adapter). Insert the fiber optical cable at the other end into the optical fiber interface in the terminal box, open. Fiber optic cables: Choose fiber optic cables that match the fiber termination box and have enough cables to connect the fiber termination box to other network devices. It offers a cost-effective method to handle large quantities of fiber cables in an orderly.
