

Introduction to Gigabit Optical Modules

Overview

GPON SFP (Gigabit Passive Optical Network Small Form-Factor Pluggable) modules are compact, hot-pluggable transceivers used in optical communication networks. These modules are typically installed in Optical Line Terminals (OLTs) at the service provider's central office and Optical Network Units (ONUs) or Optical Network. A passive optical network (PON) or Gigabit Passive Optical Network (GPON) is a point-to-multipoint (P2MP) network that uses a combination of active transmission equipments and passive cable components to provide network connectivity to end user's devices. This article explores the technical foundations, working. The working principle of optical modules is illustrated in the diagram shown in the Optical Module Working Principle Diagram.
