

Is the junction box waterproof

Overview

Even the best outdoor junction box will not remain waterproof unless the cable entries are correctly sealed. To maintain the manufacturer's IP rating, always use: Nylon IP65 / IP68 glands for flexible or Hi-Tuff cables., IP65 for dust-tight + water jets; IP67 if temporary immersion is possible), select a box with enough. Among the multitude of precautions we take, waterproofing junction boxes stands out as a critical measure, especially in environments exposed to moisture, rain, or even the occasional splash. It's not merely about preventing shorts or power outages; it's about ensuring the longevity and reliability. Every outdoor junction box carries an Ingress Protection (IP) rating under BS EN 60529, defining its resistance to dust and water. The first digit relates to solids (dust), the second to liquids (water). The answer is that it is highly water-resistant and designed to handle most outdoor weather conditions.
