

Lithuania Smart Building Fiber Optic Cable Project

Overview

The ISRI project is transforming Lithuania's connectivity by installing 1,000 km of fiber optic cables and connecting 1,118 new users. This initiative ensures high-speed, reliable internet access, even in the most remote areas of the country. This project will drive Lithuania forward into the digital future, expanding internet. Lithuania's plan for the ultra-fast broadband development aims to provide 100 Mbps by 2027 to households and public institutions in cities and rural areas. This step was important for the development of a common urban communication infrastructure and, in particular for the. To properly implement the project "ISRI-2", digital maps of existing 5G and 4G infrastructure managed by private operators and the state and planned to be installed in the next 3 years, data on infrastructure coverage and possible theoretical network speeds are provided for public consultation. Lithuania is leading in 5G, but the development of fixed communications raises concerns: where are we heading?

The European Commission has published its 2025 Digital Decade Progress Report.
