

Low-voltage busbar trunking agent

Overview

A Busbar Trunking System (BTS) is a factory-built low-voltage power distribution assembly verified under IEC 61439-6. It uses prefabricated busbar sections, joints, tap-off units, and accessories to distribute power safely with defined current ratings and short-circuit withstand. See how Siemens' powerful, cost-efficient SIVACON 8PS busbar trunking systems are ready for tomorrow's tasks today. It provides a modular alternative to cable risers, feeder. Guide to Low Voltage Busbar Trunking Systems Verified to BS EN 61439-6 Guide to Low Voltage Busbar Trunking Systems Verified to BS EN 61439-6 November 2014 Guide to Low Voltage Busbar Trunking Systems Verified to BS EN 61439-6 Companies involved in the preparation of this Guide Acknowledgements. The Busbar Trunking System is the perfect choice for projects where flexibility and reliability are key to a projects success. This applies to power transmission, for application between transformer, primary distribution system and the subdistribiution systems as well as in. The busbar trunking system for power transmission under extreme ambient conditions (IP68). Detailed information about this system is available from the Siemens branch located close to you.
