

Nigerian Low-Power Optical Module DML

Overview

The NEL NLK1551SSC directly-modulated laser (DML) is a cost-effective solution for 10Gb/s digital transmission of up to 50km using traditional intra-city fiber links. The package contains a high-speed DFB laser chip, thermoelectric cooler, thermistor, optical isolator, and a. Industry-leading linear drivers for 100G to 1. Or It is also suited for analog fiber transmission. The package. Basic design is based on HL13B5 with high reliability and high productivity. Optical transceivers primarily adopt two mainstream modulation technologies: DML and EML. Below is a simplified working principle diagram: The optical signal. Below is a simplified working principle diagram: Figure 3 Working Principle Diagram of Optical Transceiver The optical signal transmitted through optical fibers is not constant; instead, it is a modulated signal with varying intensity.
