

Non-mechanical cable trays

Overview

Cable trays support insulated electrical cables in industrial and commercial settings. There are several types of cable trays, including ladder, perforated, solid bottom, basket, and channel trays. Each cable tray type performs a different function and comes in various materials such as aluminum. A non-metallic cable tray is a type of support structure designed to manage and protect cabling in various environments. They are particularly effective in. Whenever cable support systems are exposed to the elements and/or caustic substances (such as petrochemical applications), they are given an additional treatment in the form of hot-dip galvanizing. Cable trays are capable of supporting all types of wiring: such as High Voltage Power Lines.
