

Optical Cable Skeleton

Overview

Skeleton optical fiber ribbon cable has the characteristics of high optical fiber density, small outer diameter saving pipeline resources, good lateral pressure resistance, stable structure, convenient connection, no filling grease, and environmental protection. The invention discloses a skeleton type optical cable and a preparation method thereof. Based on the characteristics of several typical. FTTH distribution optical cable usually includes stranded loose tube optical cable, loose tube ribbon cable and skeleton ribbon cable. The. The skeleton type optical cable comprises a skeleton, a strengthening part located at the center of the skeleton, a protecting layer wrapping the skeleton wholly and a sheath layer extruding and wrapping outside the protecting layer; a plurality of rectangular skeleton grooves are distributed in. According to the state of the coated optical fiber in the optical cable, the optical cable has two types: tight structure and loose structure.
