

Optical Imaging Cables

Overview

Fiber optic cables are an essential component of modern medical imaging and healthcare technology. These thin strands of glass or plastic are able to transmit large amounts of data at high speeds, making them ideal for use in medical imaging equipment such as MRI machines and CT. SCHOTT® flexible imaging bundles offer an imaging solution for environments where conventional electronic systems fail or cannot operate. Designed for harsh environments, confined spaces, and power-restricted areas, these passive, flexible fiber optic bundles transfer images over distance, even. Fiber Optic Image Conduits transmit images from one polished face to the other and can be used straight or bent to fit space requirements without loss of light transmission. These conduits are fused glass optical fiber rods with ground and polished faces. With precise and lossless image reproduction, medical imagery solutions ensure that doctors can make accurate diagnoses and plan. Our custom fiber optic cables for medical devices and assemblies are specifically designed and manufactured to meet the rigorous demands of medical applications, from robot-assisted screenings and processes to intricate diagnostic imaging. We partner with our customers from the development phase to. For high-resolution images, Rosenberger offers shielded high-speed connectors and special cable assemblies to ensure the display is independent of space and time and to reduce signal-to-noise problems RosenbergerHSD, RosenbergerHSD +, RosenbergerHSD t - High-Speed-Data connector systems up to 6 GHz. Koincable is a fiber optic cable manufacturer that designs and manufactures fiber optic cable for medical imaging.
