

Optical Module Housing Distributor

Overview

Modular distributor housing for copper and fiber optic applications. Optoelectronics is based on the properties of light and photons and has its origin in phototechnology, which deals with the generation and use of light. Their primary function is to protect and manage the spliced fiber optic cables, ensuring they remain secure, well-organised, and unaffected by environmental factors. The housing accepts preterminated EDGE 12-fiber modules and offers protection for the fiber cable and connectors for indoor wall-mount. Wherever glass fiber connections have to be installed in a harsh environment - in offices, industry or Fiber-to-the-Building/-Home customer access networks - high demands are made on the value and flexibility of the distributor housing and easy access whilst installation and maintenance. The box can be quickly and easily attached directly to the mounting rail (DIN rail). The enclosed front panels allow the. What Exactly is an Optical Module Housing?

An optical module housing is the protective outer shell that encloses the internal components of an optical transceiver module.
