

Optical cable pulling end

Overview

At the end of the gripping cord is a pulling eye. By attaching a hook through the pulling eye, installers can successfully pull fiber cable through ductwork (conduits, trays and raceways) or a small, tight space. In pre-terminated assemblies, pulling eyes (with a protective sock) can also protect. Such multifiber pre-terminated fiber cable assemblies are designed with pulling eyes, which can be used with 2 to 24 fiber cables. The Future Ready Solutions Tools & Test Equipment collection explores these solutions in greater detail. Our News & Insights library is also a wealth of knowledge, and we offer articles that delve. A fiber optic cable puller is a specialized tool used during the installation or pulling of fiber optic cables. The fiber puller is designed to facilitate the process of running fiber optic cables through conduit, ducts, or other pathways in both indoor and outdoor environments.
