

Palau 400g Fiber Optic Module Single Mode

Overview

The 400G-FR4-LPO specification by the LPO (Linear Pluggable Optics) MSA defines a four-wavelength 100 Gb/s/lane, 53.125 GBd, PAM4 optical interface using standard single-mode fiber with reach up to at least 500 m, and host-module electrical interfaces for hosts with DSP. PAM4 (4-Level Pulse Amplitude Modulation): This is the predominant modulation technique used in 400G modules. Multi-Mode Fiber (MMF):. SR8 transmits eight 50G PAM4 electrical lanes over eight pairs of multimode fiber. It's the lowest-cost 400G option—but with specific fiber requirements that trip up many deployments. Forward error correction (FEC) is. Engineering teams have developed a broad set of 400G pluggable optics that support an extensive range of use cases for customers, including 500m and 2km single-mode fiber intra-data center interconnects. The 400G optics are based on PAM4 modulation technology that has been standardized in the IEEE.
