

# Professional galvanized cable tray engineering projects

## Overview

Learn how to manufacture custom galvanized perforated cable trays with our professional guide. Is your cable tray system optimized for safety, dependability, space and cost savings?

Cable tray (or cable ladder) systems are a popular alternative to electrical conduit systems, as they have an outstanding record for dependable service, design flexibility and cost savings in commercial and industrial applications. ABB designs and manufactures cable tray systems, including perforated tray, cable ladder, channel tray and strut (metal framing), directly from production facilities in Canada and Saudi Arabia. Our cable trays are designed to provide optimal cable routing, ventilation, and protection, reducing the risk of fire. The Global Galvanized Cable Tray Systems Market was valued at USD 1.27 Billion in 2023 and is projected to reach USD 2.44 billion during the forecast period (2024-2032). This growth is being driven by increasing infrastructure. Heavy duty cable trays and cable ladders are manufactured from pre-galvanized or hot-dipped galvanized sheet metal, designed to meet ideal environmental working conditions for indoor and outdoor use in commercial or industrial environments with high cable density. These trays can be easily attached to.
