

RGB optical module

Overview

The RGB modules are designed for projection, imaging and illumination allows to achieve balanced white color, with the presence of three laser diodes - red, green, and blue. Each RGB module is based on brand, high-quality components. We are selling products with and without power. Ultra-compact RGB modules utilizing EXALOS low-threshold Visible laser diodes and/or SLEDs. This makes it possible to achieve full-color rendering. Our standard RGB laser modules cover a range of wavelengths including 405nm (violet), 450nm (blue), 520nm (green), 635nm. Compact laser module without compromises in terms of wavelength or optical output power. Perfectly matching the demand for industrial integration and scientific applications. Miniaturized laser module complete with controller and USB power supply in an incredibly small package. In addition to laser projection, these. Delve into ALTER's Miniaturized RGB Laser Module datasheet.
