

Relay protector light is on red

Overview

What does the red LED indicate on the RM4TU relay when it is on?

It indicates an undervoltage fault. Visit our Community for first-hand insights from experts and peers on this topic and more. An LED on a relay module that turns on and off when the relay operates would normally be connected such that it is on when the relay is on, but it does not have to be. Note that many relay modules are "active LOW", ie they need a LOW signal on their input pin to turn them, not a HIGH signal as you. While red lights often signal a warning, that's not the case here. In this post, we'll clear up common misconceptions about the. What is the cause when the PWR/FLT LED on a Guardmaster Safety Relay (GSR) is solid red?

Make sure the dial setting of the rotary switch is in a single position, and not in between 2 positions (for instance, between 2 settings). When you rotate the dial, make sure you feel it click and it changes. Objective: Relay devices will have three LED lights enabled at all times to indicate current connectivity status Environment: Relay Devices All Relay Service Plans Overview: Here is a reference to the LED lights you can see from Relay devices White. If the Operational LED is flashing red and green, but the device is working (protection functions are working), the self-supervision module has detected a problem with the relay. If Reboot=11: Your device suffered a short-term sag or.
