

Remote Monitoring System for Optical Cable Resources

Overview

Designed to keep NOC (Network Operation Centre) operators and field technicians informed, the RFMS diligently detects fiber-related issues such as cuts, connector removals, and degradation. EXFO's remote fiber testing & monitoring solutions are built based on fixed OTDR test equipment placed at strategic central locations across the network. The condition of fiber optic installations are constantly checked and the locations of degradations or breaks are pinpointed within minutes of. Get the Power: Scale up your fiber network quickly, deploy and monetize high-speed quality service, and cut workloads to maximize team efficiency. ONMSi Optical Network Management System for Core, Metro, Access and FTTH networks. NITRO Fiber Insight for ONMSi providing customizable data aggregation. Experience advanced network management with the Remote Fiber Monitoring System (RFMS) – the premier solution for 24/7 fiber quality monitoring.
