

SF optical module optical port type

Overview

An SFP port can connect both optical fiber cable and copper cable. Which one to choose determines the SFP module type plugged. Think of it as the “translator” for your network equipment, converting electrical signals into optical signals. An SFP (Small Form-factor Pluggable) is a compact, hot-pluggable transceiver module that allows networking equipment — including switches, routers, servers, and media converters — to support different physical media, such as optical fiber or copper, without replacing the host hardware. This modular. Both the GBIC module and SFP module are input/output devices used to link the 1000BASE-X fiber optical or copper network by plugging into a Gigabit Ethernet port of network switch or router devices. It is also known as a small form-factor pluggable or mini GBIC.
