

Secondary power distribution box aviation socket

Overview

The DC Secondary Power Distribution Unit (SPDU) is an aerospace and mil-spec electronic circuit breaker system that leverages digital communications and the use of solid-state technology to develop a highly configurable, rugged, flexible, and lightweight power distribution system. The DC Secondary Power Distribution Unit (SPDU) is an aerospace and mil-spec electronic circuit breaker system that leverages digital communications and the use of solid-state technology to develop a highly configurable, rugged, flexible, and lightweight power distribution system. The DC Secondary Power Distribution Unit (SPDU) is an aerospace and mil-spec electronic circuit breaker system that leverages digital communications and the use of solid-state technology to develop a highly configurable, rugged, flexible, and lightweight power distribution system for today's modern. This secondary distribution system is designed to power, protect and control electrical loads. It contains thermal circuit breakers but also more advanced Solid State Power Controllers that reduce wiring & allow remote control & flexibility for the configuration change. The SSPCs can be commanded ON, OFF or. The PDU is a dual channel, redundant, EASA CS-LURS Compliant aircraft electrical system in a single box. It embeds Primary and Secondary Power distribution system, plus battery charging and 14V DC/DC converter functionality. It just requires few connections to power sources and loads to be ready.
