

Shielded equipment room waveguide for fiber optic cable

Overview

Fiber Optic Waveguide provides a secure, high-attenuation pathway for fiber cables to enter shielded enclosures without compromising RF isolation or system performance. The waveguide seal protects electronics from electromagnetic threats such as EMP and HEMP. Understanding how these components work and how to select the right configuration is essential for EMC engineers and facility designers. Industries: Academia, Aerospace & Defense, Automotive, Commercial, Government, Healthcare, Information Technology/Data Centers. Compared to the normal waveguides such as the 7850 & 7855, the fiber optic waveguides has been specially developed for the high frequency value measured with an average shielding value between 100dB @ up to 18GHz and 80dB @ up to 40GHz.
