

Stairwell electrical distribution box controls the lights

Overview

Lighting zone is controlled with 0-10V dimming, programmable max/min levels, vacancy-dim level, local digital control stations. Lights turn on to 100% at digital switch station, Dim to 50% with off and allow full range dimming. Although stairwells still require the advanced energy-saving capabilities of other code-compliant spaces (such as daylight harvesting, demand response and occupancy sensing), there are often different guidelines for manual switching needs and the percentage of. Generally, a single light is installed to illuminate the stair during dark times and two 2-way switches are used to control the light. Implementing a staircase lighting system using two-way switches allows you to control the lights from both the top and bottom of the stairs. Using two 2-way. Options for a user-oriented light control concept in the stairwell The light control system tracks the user via sensors and only switches on light where the user is. The other terminals of both switches are.
