

Standard Requirements for Grounding Optical Cables in Power Plants

Overview

One code sits on the iron throne and rules them all: the National Electric Code or NEC. The current language regarding optical fiber cabling grounding found in the NFPA 70 NEC 2014 is as follows: " 770. 93 Grounding or Interruption of Non-Current-Carrying Metallic Members of Optical. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. This AE Note does not address outside plant fiber optic installations or. Abstract: The design, installation, and protection of wire and cable systems in substations are covered in this guide, with the objective of minimizing cable failures and their consequences. "If we silver-plate our copper plant, we should gold-plate our fiber plant. " This is a great sentiment, but we rarely stopped to ask if we needed the same type. In this article, we offer an in-depth look at grounding practices, electrical safety procedures, and how advanced data analytics, such as those offered by DataCalculus, can further enhance these safety protocols. The utilities industry is driven by strict regulatory standards and demanding.
