

Supernode Optical Module

Overview

To meet this demand, Huawei launched Ascend Supernode technology in 2025 and debuted the Ascend 384 Supernode at the Kunpeng Ascend Developer Conference that same year. 2% failures stem from optics & how QSFPTEK cuts costs by 69. On May 14, 2025, the "2025 Chip and Optical Forum" hosted by HiSilicon and organized by. The global AI computing industry has introduced supernode technology to address this issue. Large AI models involve both scale-up and scale-out networks, and AI computing supernode technology aims to integrate hundreds of GPUs/NPUs to form high-density computing units, such as the NVIDIA GB200. XPO represents a new class of optical pluggable module designed specifically for next-generation AI data center fabrics. 8Tbps of bandwidth using 64 electrical lanes and incorporates an integrated liquid-cooled cold plate capable of supporting 400W+ module power. To address this, Macom and NVIDIA first proposed Linear-drive Pluggable Optics (LPO) in 2022. Its core concept is to remove digital processing units such as DSPs and CDRs from the module, constructing a purely analog "linear direct-drive" optical link. The short-distance optical return loss positioning technology enables precise and efficient identification of contaminated or loose optical modules.
