

The light emitted from the sc optical module

Overview

The transmit optical module inputs electrical signals at a certain bit rate, which are then processed by the internal driver chip. After the processing, the drive's semiconductor laser diode (LD) or light emitting diode (LED) emits modulated optical signals at the. The SC interface optical module refers to the optical module with an interface type of SC, which must be paired with the SC interface jumper to function properly. The fastening method of the interface of the SC optical module is a plug-in latch type, which does not require rotation and is very. The working principle of optical modules is illustrated in the diagram shown in the Optical Module Working Principle Diagram. An. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. For more detail information, please refer to the URL <ftp://ftp.com> for the official documentation.
