

Thickness requirements for grooved cable trays

Overview

According to the 2017 standard, the maximum thickness of corrugated groove steel cable tray plate is 0. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or. Our Cable Tray Design Considerations Guide details key factors to consider when designing cable tray systems for industrial and commercial applications. It also demonstrates how Eaton's solutions and services can help: As an industry leader in cable tray, Eaton offers one of the widest ranges of. The International Electrotechnical Commission (IEC) provides detailed guidelines for cable tray systems under IEC 61537. Perforation patterns and sidewall height should always be considered when calculating fill and heat dissipation.
